

SPEEDTURF58

NON-INFILL, MULTI-SPORT ARTIFICIAL TURF

Looking for the best speed/agility training turf that is not abrasive? Our Speedturf58 is a premium padded turf system made of durable nylon & polyethylene fiber, perfect for SPEED & AGILITY training and field applications. Manufactured for maximum resistance to wear using fibers and yarns that look and feel like genuine grass, which makes our turf especially suitable for all multi-sports field applications. The tall fibers and short yarn which makes a thatch zone eliminates the need for rubber or sand infill. Speedturf58 can be manufactured with a white line tufted in on one side of the turf that runs parallel with the length of the roll, eliminating the need for painted lines.

- Nylon fiber root zone construction
- Designed for indoor Speed & Agility use
- No infill required
- 5mm Shock pad

MATERIALS	
FACE WEIGHT	58 OZ
PRIMARY / SECONARY YARN	POLYETHYLENE & MONOFILAMENT NYLON
